Senior software engineer with eight years of experience building user-facing apps, most recently the Siri app, Image Playground, and Freeform for Apple Vision Pro. Looking to build polished, consumer-facing experiences across Apple platforms.

WORK EXPERIENCE

APPLE | Senior Software Engineer, Vision Products Group — Seattle, WA | December 2022 – Present

Siri App

- Shipped the visionOS Siri app, bringing a conversational, generative AI experience to spatial computing.
- Co-led MVVM and dependency injection architecture guidelines for a 130+ contributor codebase; core code reviewer.
- Served as acting lead of the 17-engineer team for the three weeks before code complete, landing all committed work on schedule. Represented the app in late-cycle release triage, weighing customer impact against risk.
- Led product reviews with Human Interface design, product, and partner teams across several organizations.
- Built parallelized Claude Code agent workflows for bug triage, issue tracking, and concurrent development.

Image Playground

- Joined the iOS and macOS team for six months, shipping cross-platform Apple Intelligence image generation features.
- Built the custom visionOS interface, adapting the iOS experience to uniquely exercise spatial capabilities.

Other Projects & Community

- **Freeform:** brought Freeform to the initial visionOS release, focusing on 3D models, accessibility, and ship readiness.
- **Prototyping:** built immersive 3D interaction prototypes in RealityKit, resulting in a filed patent on virtual workspaces.
- **Mentorship:** mentored an intern whose project was selected for a demo to Mike Rockwell (head of Siri).
- **Community:** served as a lead of Seattle's Women@Apple chapter, organizing networking and community events.

MICROSOFT | Software Engineer II, HoloLens — Seattle, WA | April 2021 – November 2022

- Built holographic 3D visualizations of geospatial and temporal ocean data for National Geographic's *OceanXplorers* (BBC Studios, OceanX, James Cameron), which aired on Disney+ in 2023. Adapted this work into a real-time collaborative tool deployed aboard the OceanXplorer research vessel.
- Rebuilt the device management and data ingestion as a web app, with REST endpoints serving live data to the visualizer.
- Led the location-based experiences project with Flying Fish Exhibits: a five-year traveling mixed reality museum installation on marine research.

THE WALT DISNEY COMPANY | Software Engineer, Disney Studios — Glendale, CA | June 2018 – March 2021

- Designed and developed two new applications in Disney's asset management ecosystem for managing title and data input metadata, owning UI and integration. Extended file transfer to support folder management.
- Independently built custom ingestion, back-end, and UI support for industry-standard IMF packages.

SKILLS

Languages:	Swift, JavaScript, C#, Python, Java, HTML / CSS, Objective-C
Apple Development:	SwiftUI, UIKit, Swift Concurrency, Swift Testing, RealityKit, ARKit, App Intents, WidgetKit, Accessibility, Localization
AI:	Apple Foundation Models, Claude API, Claude Code (multi-agent workflows, skills, hooks), prompt engineering, structured and streaming output
Tools:	Xcode, Git, CI/CD, Unity, Visual Studio, Keynote, Pages, Blender, Illustrator, After Effects, Procreate
Web:	React, Redux, Node.js, Angular, MongoDB, REST APIs

EDUCATION

BA Computer Science, Studio Art — Claremont, CA | May 2018

Pomona College — *Cum Laude*
